

LPG CYLINDER SAFETY

NP GAS has taken all the necessary precautions to supply your 20lb and 100lb cylinders, but safety doesn't stop with us, you still have a part to play.

PLEASE FOLLOW THESE **3 RULES** WHEN HANDLING 20LB CYLINDERS:

RULE #1

Ensure that the regulator/pressure valve is in proper working condition at all times. It is recommended that regulators/pressure valves be replaced every ten (10) years.

RULE #2

Never attempt to install a regulator/pressure valve that is in an open position onto a cylinder or in the presence of an open flame.

RULE #3

Never replace the regulator/pressure valve on a full cylinder in the presence of any open flame (e.g., another lit stove).
Note: Some gas normally escapes when changing from one cylinder to another.

SAFETY TIP
