

LPG CYLINDER SAFETY

NP GAS has taken all the necessary precautions to supply your 20lb and 100lb cylinders, but safety doesn't stop with us, you still have a part to play.

PLEASE FOLLOW THESE **3 RULES** WHEN HANDLING 20LB CYLINDERS:

RULE #1

Ensure that the clips on both ends of the hose are properly secured to avoid gas escaping. Suspected leaks can be checked by using a soapy water solution, NOT with a flame.

RULE #2

Ensure that the valve is free of any debris or any foreign matter, e.g., dirt, dust and spider webs, etc. Do not depress/tamper with the pin on the valve.

RULE #3

Ensure that the rubber O-ring is on the valve before use and is in good condition, i.e. no cracks, rips or tears.

SAFETY
TIP
