

LPG CYLINDER SAFETY

NP GAS has taken all the necessary precautions to supply your 20lb and 100lb cylinders, but safety doesn't stop with us, you still have a part to play.

PLEASE FOLLOW THESE **4 RULES** WHEN HANDLING 20LB CYLINDERS:

RULE #1

Ensure that there is no ignition source within 1.5 metres (five feet) of your LPG cylinder. Do not smoke near LPG cylinders.

RULE #2

Ensure that the cylinder is positioned upwind and at least 1.5 metres (five feet) from the cooking appliance.

RULE #3

20lb cylinders should not be kept unused for more than six (6) months to ensure rotation for inspection by the LPG Filling and Testing Plants.

RULE #4

Always conduct a leak test by using a soapy water solution when the cylinder is purchased and after installation.

SAFETY TIP
